

We have been using SGI filters in vehicles from our Cargo Parts company since 2020 and sell these products to our customers. Most of the vehicles in which SGI filters have been installed are MAN trucks and MAN vans, such as the MAN TGE 3.180.

We would like to share the following results:

- The most important thing for us was the fuel saving. And it was definitely worth having the SGI filters installed: The average saving is between 8% and 15%, depending on the driving style and load of the vehicles.

- In the cold winter months, drivers report no problems starting the vehicles.

- The engines run much more smoothly than before the SGI filters were installed

- I would like to express my special thanks for the technical support of the employees of Schroeder Green Innovation GmbH, for helping us with every installation issue.

Managing Director of Cargo Parts
