"As a technician, I see the following main advantages of the SGI system:

1. On the one hand, the customer response is clearly positive in the area of fuel consumption, on average we can talk about a fuel saving, depending on the vehicle, of at least 0.5 to 1.0 liters / 100 km. On average, in a representative survey of 30 customers, the fuel saving is 0.70 liters / 100 km, which is about 10 - 15%.
2. But even more interesting and simply ingenious for us is the fact that after the installation of the fuel modifier / SGI filter, we no longer have any problems with the otherwise very dirt-prone exhaust gas recirculation system. We can state and assure here that there is virtually no more contamination of the EGR system by combustion residues: Thus, high follow-up costs for cleaning / repair or renewal of EGR systems, intake manifolds, exhaust manifolds as well as particle filters of any kind are eliminated.
3. Therefore, as the owner of KFZ-Service Müller e.K., I can clearly make a recommendation: the SGI filter is an added value for your vehicle and delivers what it promises."

With kind regards,

Michael Müller

Business owner
